

HEADACHES, MIGRAINES AND MIMICS

Dr Julian Smith
University of Pretoria
Department of Paediatrics

WHY HEADACHE IS IMPORTANT

- Up to 51 % of 7 year olds
- Up to 82 % of 15 year olds
- Migraines: 4 % children under 5yr
- Migraines: 10 % children 5-15 yr
- Boys>Girls when young.
- Girls>>Boys by teens

Image Credit: Africa Studio / Shutterstock

WHERE HEADACHE COMES FROM: INTRACRANIAL

- Cerebral and dural arteries
- Dura Mater at base of brain
- Large veins and venous sinuses
- No pain-brain parenchyma,
- ependymal linings, meninges, dura

Normal Anatomy of the cerebral venous system

WHERE HEADACHE COMES FROM: INTRACRANIAL CONT

- Cerebral and dural arteries: vasodilation, inflammation, traction displacement
 - Raised Intracranial pressure cause traction displacement of arteries
 - Supratentorial Blood vessels: Trigeminal Nerve
 - Infratentorial Vessels: 1st 3 Cervical Nerves
 - Superficial Dura Mater: Ophthalmic division Trigeminal nerve-refers to eye and forehead
 - Middle Meningeal artery: Second and Third divisions of trigeminal nerve-refers to temple
 - All post fossa refers to occiput and neck
- 

RAISED INTRACRANIAL PRESSURE CAUSING BLOOD VESSEL TRACTION DISPLACEMENT

Normal scan

Swollen brain

Extradural haematoma

Multiple abscess

Congenital cyst

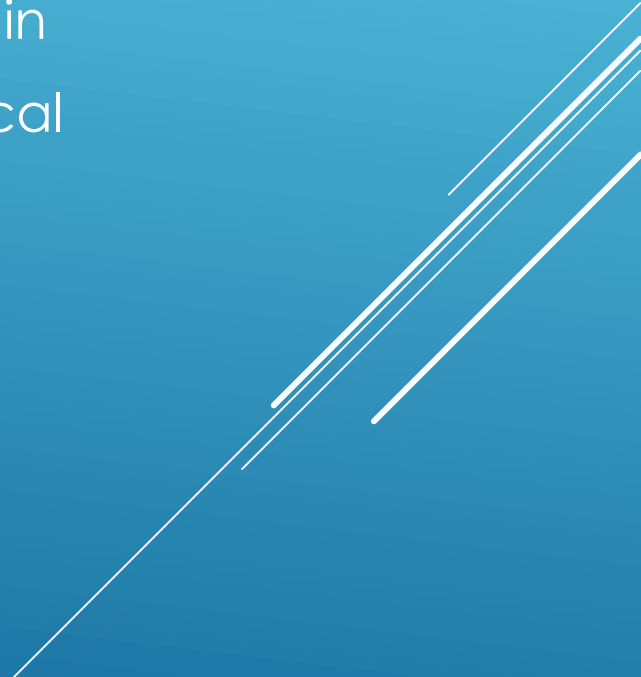

Brain tumour

ROYTOWSKI, David; FIGAJI, Anthony. Raised intracranial pressure: What it is and how to recognise it. **Continuing Medical Education**, [S.l.], v. 31, n. 3, p. 85-90, mar. 2013. ISSN 2078-5143.

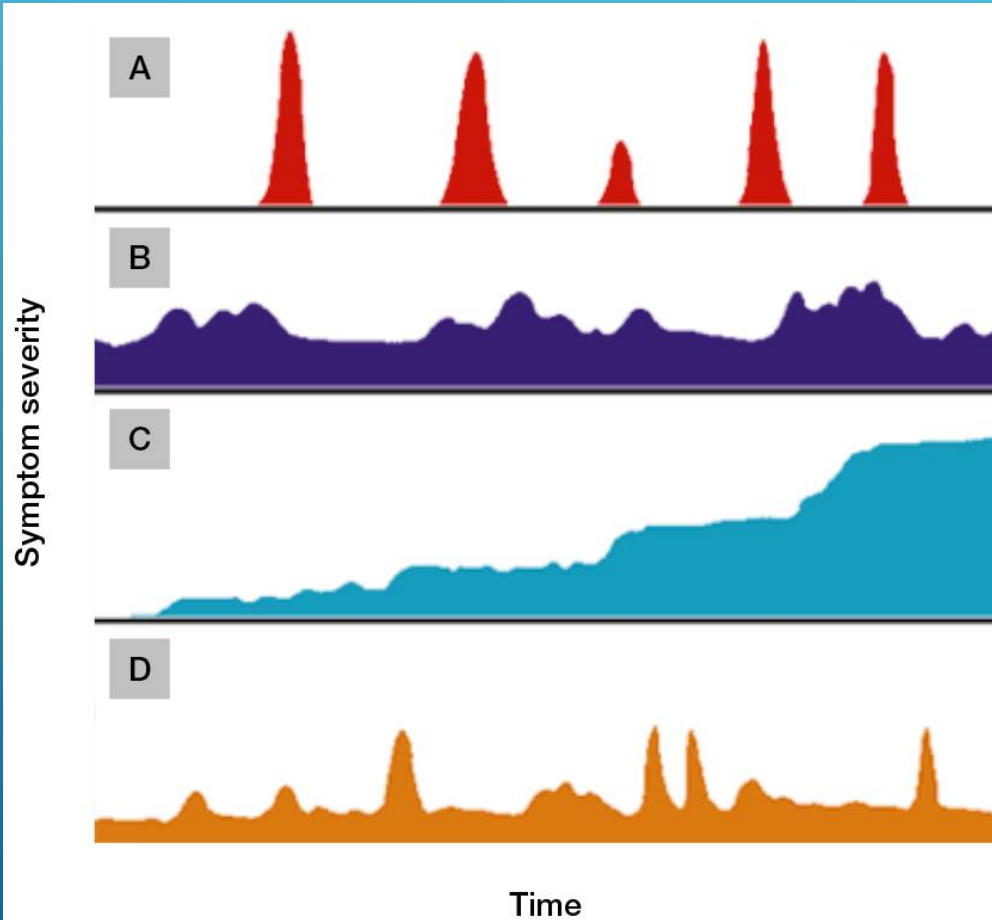

WHERE HEADACHE COMES FROM: EXTRACRANIAL

- Cervical Roots
 - Cranial Nerves
 - Extracranial arteries around eyes, forehead, temple-dilate and stretch
 - Muscles attached to skull: neck extensors, masseter, temporalis, frontalis
 - Periosteum esp near teeth and sinuses
 - Sinuses
- 

WHERE HEADACHE COMES FROM: EXTRACRANIAL CONT

- Impaired vision-blurring, not pain
 - Convergence Disorder : Muscle tension-orbit and forehead pain
 - Cervical root and cranial nerve pain usually due to mechanical traction from injury or malformation
 - Cervical Roots: Neck and back of head up to vertex
 - Cranial Nerves : Refer to face
- 

HISTORY: HOW OFTEN HOW BAD?

A. Acute recurrent

Migraine (common, classical, complicated)

B. Chronic non-progressive

Tension

Anxiety

Depression

Somatisation

C. Chronic progressive

Tumour

Benign intracranial hypertension

Brain abscess

Hydrocephalus

D. Acute on chronic non-progressive

Tension headache with co-existent migraine

HISTORY

- Identify Position of Pain and Pattern
 - Acute Generalized
 - Acute localised
 - Acute recurrent
 - Chronic Progressive
 - Chronic Non Progressive
- 
- A decorative graphic consisting of several parallel white lines of varying lengths, slanted upwards from left to right, located in the bottom right corner of the slide.

USEFUL QUESTIONS

- Is the headache chronic but not disabling or occasionally and preventing normal activity
 - What is longest time headache free
 - How many different kinds of headache
 - What analgesics and how often
- 
- A decorative graphic consisting of several parallel white lines of varying lengths and orientations, located in the bottom right corner of the slide.

ACUTE GENERALISED HEADACHE

- Systemic/generalised Infection
 - Exertional
 - CSF Leak
 - Post Seizure
 - CNS Bleeds
 - Hypertension
 - Metabolic-low glucose, high CO₂, Low O₂
- 
- A decorative graphic consisting of several parallel white lines of varying lengths, slanted upwards from left to right, located in the bottom right corner of the slide.

ACUTE LOCALISED HEADACHE

- Sinusitis
 - Ot Med
 - Temporomandibular Joint
 - Ocular Disease
 - Neuralgia-trigeminal, glossopharyngeal, occipital
 - Trauma
 - Dental Disease
- 
- A decorative graphic consisting of several parallel white lines of varying lengths and orientations, located in the bottom right corner of the slide.

ACUTE RECURRENT HEADACHE

- Migraine
 - Cluster
 - Paroxysmal Hemicrania
 - Episodic Tension Headache
 - Ice Pick
 - Exertional
 - Cough
 - Intercourse
- 
- A decorative graphic consisting of several parallel white lines of varying lengths and orientations, located in the bottom right corner of the slide.

CHRONIC PROGRESSIVE HEADACHE

- ▶ CNS Neoplasm
 - ▶ Pseudotumor cerebri
 - ▶ Brain Abscess
 - ▶ Subdural Haematoma
 - ▶ Hydrocephalus
- 
- A decorative graphic consisting of several parallel white lines of varying lengths and orientations, located in the bottom right corner of the slide.

PRIMARY HEADACHE DISORDERS

A) MIGRAINE

1. Status Migrainosus
 2. Familial Hemiplegic Migraine
 3. Basilar Type Migraine
 4. Benign Paroxysmal Vertigo of Childhood
 5. Acute Confusional Migraine
 6. Migraine Associated Cyclic Vomiting Syndrome
 7. Abdominal Migraine
 8. Paroxysmal Torticollis of Infancy
 9. Acephalgic Migraine of Childhood
 10. Ophthalmoplegic Migraine
- 

PRIMARY HEADACHE DISORDERS

- B) Chronic Daily Headache Disorder
 - C) Paroxysmal Hemicrania
 - D) Tension Type Headache
 - E) Trigeminal Autonomic Cephalalgias
 - F) Cluster Headache
 - G) SUNCT Syndrome
 - H) Icepick Headache
- 
- A decorative graphic consisting of several parallel white lines of varying lengths, slanted diagonally from the bottom right towards the top right, located in the lower right quadrant of the slide.

SECONDARY HEADACHE DISORDERS

- A) Cerebral Venous Sinus Thrombosis
 - B) Pseudotumour Cerebri-Idiopathic Intracranial Hypertension
 - C) Headache in Chiari Malformations
 - D) Trauma Related Headaches: Epidural and Subdural Hematomas
 - E) Headache and Meningitis: Bacterial Meningitis Viral Meningitis
 - F) Headache and Brain Tumours
 - G) Headache and Vascular Malformations
 - H) Headache and Brain Abscess
 - I) Headache and Hydrocephalus
- 

| Preschool | School | Adolescents |
|-----------|--------------------|---|
| Looks ill | Bilat | Unilat |
| Pale | Frontal | Bilat |
| Abd pain | Temporal | Temporal |
| Vomit | Retroorbital | Aura |
| Sleep | Nausea anorexia | Location and intensity changes between episodes |
| Dark room | Abd cramps | |
| Irritable | Vomit | |
| crying | Photophobia | |
| | Phonophobia | |
| | Sleep | |
| | Aura | |
| | Confusion | |
| | Memory loss | |

MIGRAINE

MIGRAINE AURA

- 10-20% of over 8 yr have Aura
- Precedes headache < 60 mins
- Lasts 5-20 mins
- NONVISUAL AURAS
- Attention loss, confusion, amnesia, agitation
- Aphasia, ataxia, dizziness, vertigo
- Paresthesia, hemiparesis

MIGRAINE AURA

- VISUAL AURAS
- Blurred vision, scotoma
- Scintillations, black dots
- Fortification Spectra, Kaleidoscopic Colour patterns
- Micropsia, Macropsia, Metamorphopsia (Alice in Wonderland)
- Moving or Changing Shapes
- Headache then 1 hr to 48 hr, usually < 4 hrs, young 10-20 mins

MIGRAINE COMORBIDITIES

- Epilepsy
- Motion sickness
- Sleep Disturbances
- Ice cream Headache
- Psychiatric:
 - Depression
 - Panic Episodes
 - Anxiety
 - Phobias

PEDMIDAS

TABLE 1

Pediatric Migraine Disability Assessment (PedMIDAS)

In the past three months:

How many full days of school did you miss because of headaches?

How many partial days of school did you miss because of headaches?

How many days did you go to school but functioned at less than one-half of your ability because of a headache?

How many days were you not able to do things at home because of a headache?

How many days were you not able to participate in other activities because of a headache?

How many days did you participate in other activities but functioned at less than one-half of your ability because of headaches?

Total the answers of all questions to get the PedMIDAS score.

PedMIDAS disability grades

| Score | Grade | Disability |
|--------------|--------------|-------------------|
| 0 to 10 | 1 | Little to none |
| 11 to 30 | 2 | Mild |
| 31 to 50 | 3 | Moderate |
| > 50 | 4 | Severe |

Information from references 1 and 2.

MIGRAINE: DIAGNOSTIC CRITERIA

- A. At least five attacks fulfilling criteria B–D (below)
- B. Headache attacks lasting 1 h to 72 h
- C. Headache has at least two of the following characteristics: Unilateral location, may be bilateral, frontotemporal (not occipital)
 - Pulsating quality
 - Moderate or severe pain intensity
 - Aggravation by or causing avoidance of routine physical activity (eg, walking, climbing stairs)
- D. During the headache, at least one of the following: Nausea, vomiting or both
 - Photophobia and phonophobia, which may be inferred from behaviour
- E. Not attributed to another disorder

PRIMARY HEADACHE DISORDERS

A) MIGRAINE

1. Status Migrainosus
 2. Familial Hemiplegic Migraine
 3. Basilar Type Migraine
 4. Benign Paroxysmal Vertigo of Childhood
 5. Acute Confusional Migraine
 6. Migraine Associated Cyclic Vomiting Syndrome
 7. Abdominal Migraine
 8. Paroxysmal Torticollis of Infancy
 9. Acephalgic Migraine of Childhood
 10. Ophthalmoplegic Migraine
- 

MIGRAINE: STATUS MIGRAINOSUS

- Severe
 - >72 hrs
 - Preexisting Migraine History
 - Rx: IV Fluids, antiemetics, DHE-Dihydroergotamine
- 
- A decorative graphic consisting of several parallel white lines of varying lengths and orientations, located in the bottom right corner of the slide.

MIGRAINE: FAMILIAL HEMIPLEGIC MIGRAINE

- Familial Hemiplegic Migraine
- Autosomal Dominant with Aura
- CACNA1A, ATP1A2, SCN1A, PRRTZ genes +fam Hx and <16yrs
- Prolonged Hemiplegia with numbness, aphasia and confusion
- Hemiplegia before, during or after headache
- Hours to days
- Hemiplegia contralateral to pain
- Some with cerebellar ataxia
- Rx Acetazolamide or Calcium Channel Blockers
- Diff Dx: structural lesions, vasculitis, cerebral hemorrhage, brain tumour, mitochondrial myopathy, encephalopathy
- Alternating hemiplegia, Lactic acidosis

MIGRAINE: BASILAR TYPE MIGRAINE

- Occipital Migraine with Aura
- Aura at least 2 of Dysarthria, vertigo, tinnitus, hyperacusis, diplopia, bifield visual symptoms, ataxia, decreased level of consciousness, bilateral paresthesias
- Hx of migraine in family
- Intermingled with typical migraine
- Disturbance in brainstem function, occipital cortex, cerebellum

MIGRAINE: ACUTE CONFUSIONAL MIGRAINE

- Acute confusion before/after
- Agitation
- Lethargy
- Dysphasia, expressive/receptive aphasia
- Often precipitated by minor head trauma
- May be recurrent
- Typical Migraine when older
- Exclude hypoglycaemia, intoxication, encephalitis, structural lesions, seizures
- Transient amnesia

MIGRAINE: CYCLIC VOMITING SYNDROME

- Recurrent regular/cyclic episodes intense vomit with symptom free intervals
- Rapid onset night/early morning
- 6-48 hrs
- Abd pain, Nausea ,anorexia
- Pallor lethargy
- Photo and phonophobia
- Headache
- Girls>boys Resolves in adolescence
- Fam Hx Migraine
- Fluid electrolyte disturbance
- Exclude Malrotation, neoplasm,urinary tract, metab,endocrine,mitochondrial

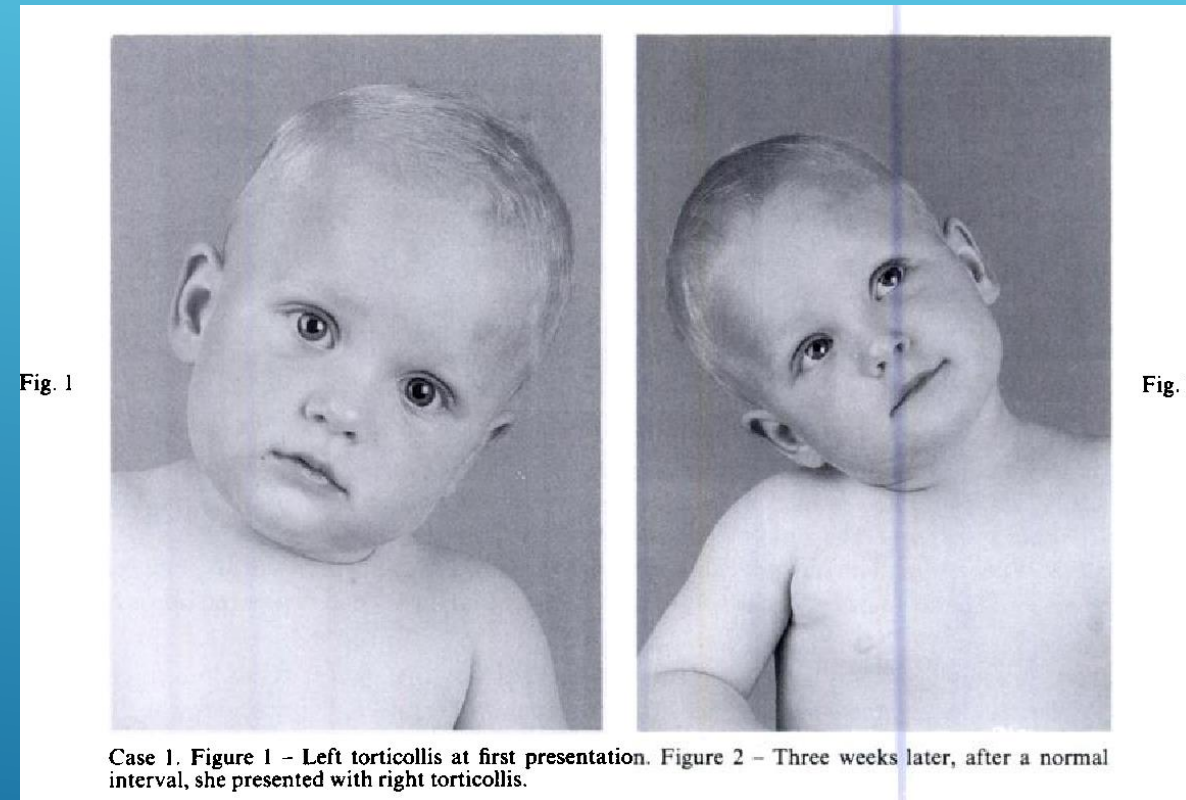

MIGRAINE: ABDOMINAL MIGRAINE

- Recurrent abdominal pain with nausea and vomiting
- Often no headache
- Sleep relieves
- Can alternate with typical migraine
- Develops adult migraine
- Rx Migraine prophylaxis

MIGRAINE: PAROXYSMAL TORTICOLLIS OF INFANCY

- Uncommon
- Repeated episodes of headtilt
- With nausea vomiting and headache
- Infants
- Minutes to days
- DDX: Post Fossa
- CACNA1A Gene

MIGRAINE: ACEPHALGIC MIGRAINE OF CHILDHOOD

- Migraine aura without headache
 - Usually visual auras
 - Girls>boys
 - Migraine family hx
- 
- A decorative graphic consisting of several parallel white lines of varying lengths, slanted diagonally from the bottom right towards the top right, set against the blue gradient background.

MIGRAINE: AURA

- 1/3 of adult and adolescent pts
- Retinal migraine-uncommon
- Monocular visual disturbance with migraine headache

Art inspired by migraine auras CREDIT: British Migraine Association

MIGRAINE: OPHTHALMOPLEGIC MIGRAINE

- Inflammatory
- Ophthalmoplegia- N III palsy unilat with headache
- MRI inflammation of N III
- Can last days
- Can be recurrent

MIGRAINE: EVALUATION AND DIAGNOSIS

- No specific test
 - History
 - Physical exam: Normal incl CNS
 - Clinical Judgement
 - Imaging: seizures, head trauma, change in headache, focal neuro deficit, papilloedema
 - EEG: not useful except atypical aura, episodic loss of consciousness, seizures
 - LP: meningitis, encephalitis, high/low pressure problem
- 

MIGRAINE: MANAGEMENT AND PROGNOSIS

- Identify trigger-doesn't eliminate headache
 - Pain control: analgesics
 - Rest
 - Reassure
 - Regular meals and bedtime
 - Time management
 - Psych triggers: stress, anxiety, worry, depression, bereavement
 - Physiological triggers: fever, illness, skipped meals, fatigue, sleep deprivation
 - Environmental triggers: light-fluorescent, bright, flickers
 - Barometric pressure changes, strong odour, computer screen, temp changes, complex visual patterns
 - Physical exertion
 - Minor head trauma
 - Travel and motion
- 

MIGRAINE: MANAGEMENT AND PROGNOSIS

- Sleep: cool dark quiet
- Ice or pressure: temporary relief
- Paracetamol
- NSAID: Ibuprofen early-migraine gives gastric stasis
- Oral 25-100 mg po/ **Nasal 5-20 mg** in one nostril Sumatriptan
- Non Pharmacological: self relaxation, biofeedback, self hypnosis
- IV Fluid
- Antiemetics: Metoclopramide/Prochlorperazine (better)
- Consider ergotamine/dihydroergotamine-vasoconstrictive-consider angio MRI before prescribing IV,nasal,oral
- >6 years: almotriptan,zolmitriptan,rizatriptan

MIGRAINE: MANAGEMENT AND PROGNOSIS

- Phase III trials: Calcitonin Gene-Related Peptide (CGRP)-Receptor antagonist- BIBN 4096 BS
 - CGRP is a 37 amino acid neuropeptide
 - A potent vasodilator in perivascular trigeminal nerve fibre supplying the pial, meningeal and extracranial cephalic arteries
 - Ubrogepant and Rimegepant registered for adult use
- 

MIGRAINE: PROPHYLAXIS

- Use daily to decrease frequency and severity
- 50% decrease in frequency considered good response
- Consider >2x per week/or prolonged and disabling
- Topiramate: best evidence
- Propranolol heart rate and orthostatic pressure monitor 3 monthly, beware asthmatics, DM, Depression
- Cyproheptadine
- Amitriptyline
- Gabapentin
- Valproate
- Flunarizine
- Ca channel blockers: Verapamil , Cinnarizine, Flunarizine
- Riboflavin
- Onabotulinumtoxin A: approved in adults

MIGRAINE: PROPHYLAXIS IN ADULTS

- Gepants (Calcitonin gene-related peptide (CGRP) receptor antagonists)
- Ditans (5HT_{1F} receptor antagonists)
- Anti-CGRP monoclonal antibodies
- Nerivio-wearable neuromodulation device
- Cefaly headband

MIGRAINE: PROGNOSIS

- Change in frequency as older
 - 60 % still have headache as older
 - 52 % have a child with migraine
- 
- A decorative graphic consisting of several parallel white lines of varying lengths and orientations, located in the bottom right corner of the slide.

MIGRAINE PLACEBO

- CHAMP trial: Childhood and adolescent Migraine prevention Trial: Amitriptyline, Topiramate and Placebo compared. Over 6 months placebo worked as well as meds.
 - Suggestion that early diagnosis and pain control modulates brain's pain response and gives improved outcome later.
 - Cognitive Behaviour Therapy very promising
- 

CHRONIC DAILY HEADACHE DISORDER

- Headache >15 days per month over 3 consecutive months
 - With no underlying organic pathology
 - >4 hrs per day
 - Adolescents and adults
 - 4% women/ 2 %men
 - May have past Hx of migraine, 1/4 no headache Hx
- 

CHRONIC DAILY HEADACHE DISORDER: 4 TYPES

- Transformed/Chronic Migraine (over hours to months)
 - Chronic Tension Type Headache
 - New Daily Persistent Headache
 - Hemicrania Continua
- 
- A decorative graphic consisting of several parallel white lines of varying lengths and orientations, located in the bottom right corner of the slide.

CHRONIC DAILY HEADACHE DISORDER:

- 2 types of Headache
 1. Prominent severe throbbing migraine like pancephalic/frontal
 2. Persistent headache when awake wax and wane 24/7, less intense, band, crushing
- Sleep improves headache
- Weak Dizzy, unsteady
- Blurry, loss of vision
- Syncopy/nearsyncopy after standing several minutes
- No vertigo except severe headache episodes
- Diff in BP standing and seated

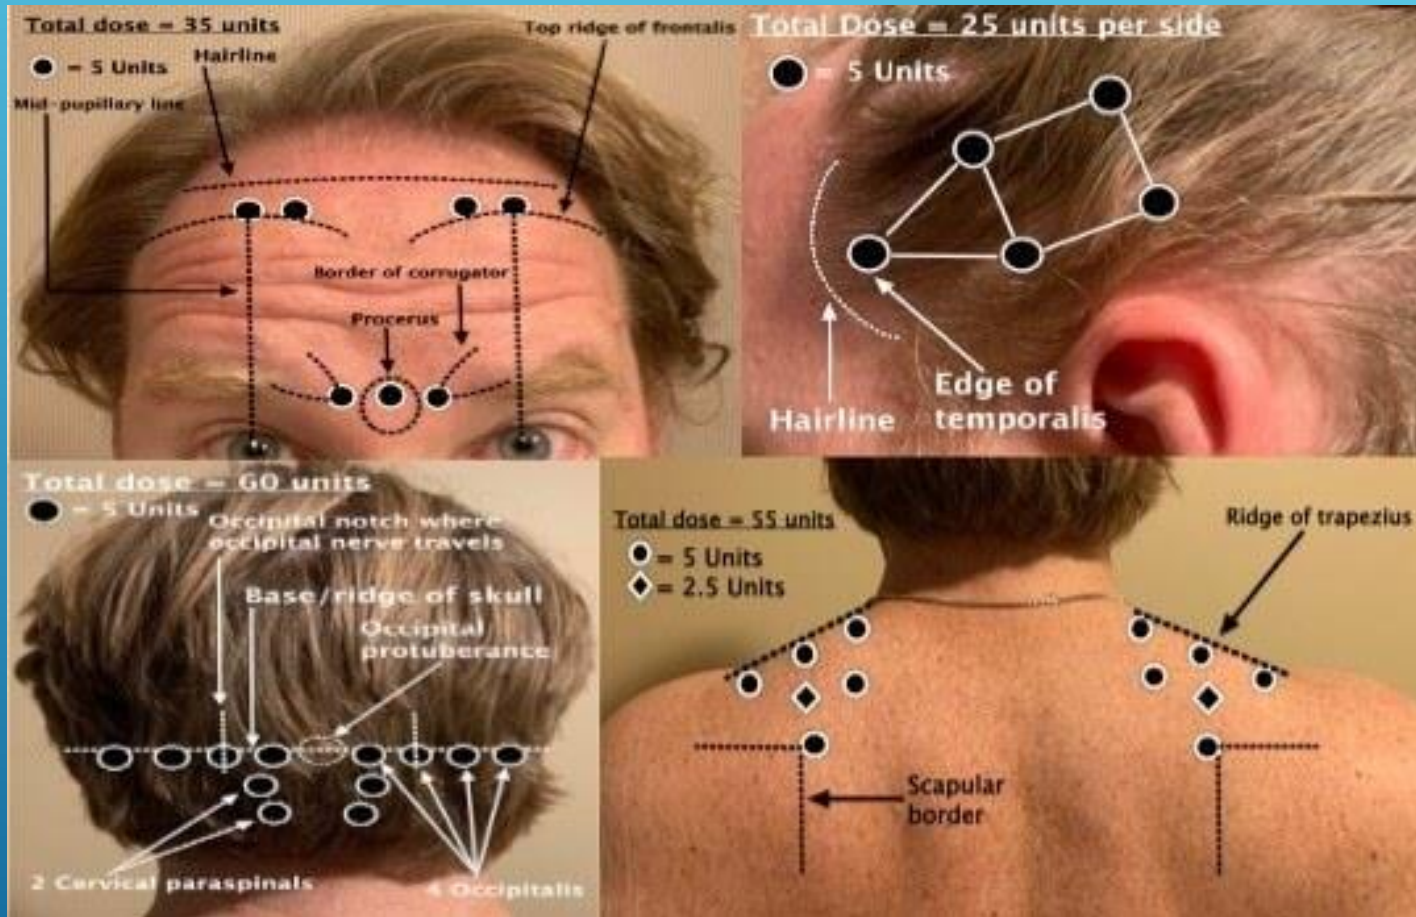

CHRONIC DAILY HEADACHE DISORDER:

- Mood and Anxiety
 - Non-specific abd pain, back,neck,muscle,joint-no etiology
 - Seasonal variability
 - MRI usually normal
 - Consider MRVenography-pseudotumor cerebri,sinus thrombosis
 - Consider TFT, ESR, ANA, EBV, West Nile, Viral, Bacterial
- 

CHRONIC DAILY HEADACHE DISORDER: RX AND PROGNOSIS

- Difficult to control
 - Education
 - Trigger factors
 - Preventative meds
 - Biofeedback
 - Physical Therapy
 - Complete resolution rare
 - Goal: severe intermittent headaches less frequent and alltime headache less intense
- 

CHRONIC DAILY HEADACHE DISORDER: RX AND PROGNOSIS

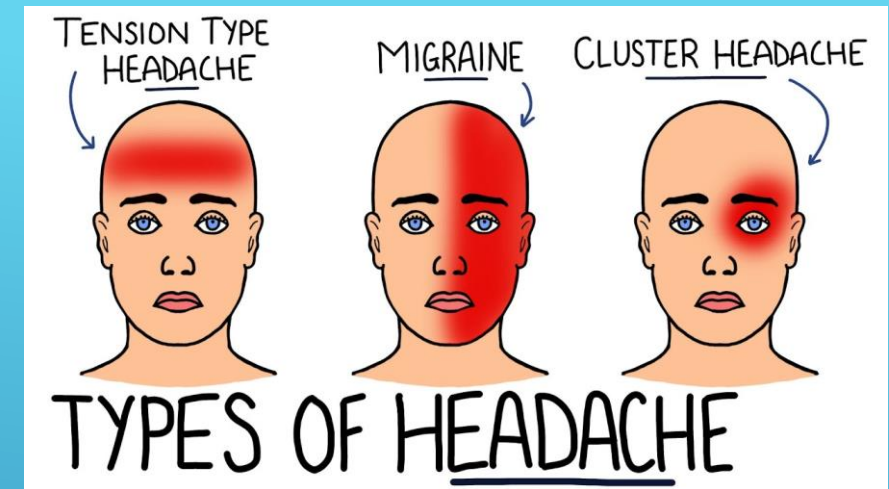

BOTOX (OnabotulinumtoxinA) FOR CHRONIC MIGRAINE; EFFECTIVE PATTERN, TECHNIQUE, AND WHAT YOU NEED TO KNOW. NOT ALL BOTOX TREATMENTS ARE CREATED EQUAL. [Dr. Eric Baron](#)
November 24, 2020, The Headache Specialist

HEMICRANIA CONTINUA

- Rare
 - 1% of chronic daily headache patients
 - Persistent unilat headache
 - Stabbing
 - Autonomic changes
 - Rx: Indomethacin
 - Pain control difficult: analgesics for acute migraine not effective for chronic migraine
 - Analgesics overuse and rebound headaches
 - Try same meds as for Migraine
 - Steroids
 - Relaxation Therapy
 - Biofeedback
 - Reconditioning exercise program
- 

TENSION TYPE HEADACHE

- Most common headache in children: Migraine and Tension-73%
- 5-12 yrs onset
- Girls>Boys
- Not familial Hx
- Pathophysiology may involve trigeminal activation

TENSION TYPE HEADACHE: MANAGEMENT

- Reassure
 - Stress reduction
 - Psych and Cognitive behaviour therapies
 - Analgesics: NSAIMS
 - Prophylactics: Antidepressants
- 
- A decorative graphic consisting of several parallel white lines of varying lengths and orientations, located in the bottom right corner of the slide.

TRIGEMINAL AUTONOMIC CEPHALAGIAS

- Repetitive, brief
- Severe
- Unilat
- Neuralgiform pain with ipsilateral autonomic features
- Rhinorrhea, nasal congestion
- Lacrimation
- Conjunctival injection
- Types
 1. SUNCT
 2. Cluster headaches
 3. Paroxysmal Hemicrania

TRIGEMINAL AUTONOMIC CEPHALAGIAS: SUNCT

- SUNCT: Shortlasting Unilateral Neuralgiform Conjunctival injection and Tearing, up to 100x per day, triggers touch face, chewing

TRIGEMINAL AUTONOMIC CEPHALAGIAS: CLUSTER HEADACHES

- Boys>girls
- <1% adults
- >5yr onset
- Pathophysiology theory: hypothalamic activation with neurogenic inflammation
- Several bouts per day lasting weeks
- Circadian Rhythmicity
- Severe unilat orbital, supraorbital, temporal pain
- 15 mins-3 hrs with autonomic features
- Familial predisposition
- CT/MRI should be done to exclude brain lesion

Cluster headaches may involve pain around one eye, along with drooping of the lid, tearing and congestion on the same side as the pain

ICE PICK HEADACHE

- Benign Primary Headache Disorder
- Sudden Icepick-like pain
- Seconds to minutes
- Different parts of head
- Migraine pt often
- Infrequent and mostly no Rx needed-Indomethacin

When I get
a headache.
I take 2
aspirins and
keep away
from children
just like it
says on the bottle!

THANK YOU
